

Empathy Map

Date	20 July 2026
Project Name	OptiCrop: Smart Agricultural Production Optimization Engine
Maximum Marks	4 Marks

SAYS	THINKS
"I never know which crop will actually give me a good yield this season." "Fertilizer is expensive — I can't afford to waste it on the wrong crop." "My neighbor's advice worked for him, but our soil is different."	"Is there a way to know exactly what my soil needs before I plant?" "What if I could test my soil and instantly know the best crop?" "I wish someone could tell me this without charging a consultation fee."
<i>Ravi — a 42-year-old smallholder farmer with 3 acres of mixed land</i>	

DOES	FEELS
- Relies on traditional/seasonal knowledge passed down from family - Occasionally visits the local agriculture office for advice - Applies fertilizer/water based on estimation rather than measurement	- Anxious about unpredictable yield and income - Frustrated by lack of accessible expert guidance - Hopeful that technology could reduce uncertainty and improve profitability

Key Insight

Ravi doesn't need more raw data — he needs a simple, fast, trustworthy recommendation that converts his soil and weather readings into one clear decision: ****which crop to plant****. This is exactly the gap OptiCrop is designed to close.
